Server Health Check

- ✓ **snapshot** of the overall health, status, and inventory details of your servers
- ✓ **actionable** insights to improve reliability, performance, and security
- ✓ **expert-led** consulting personalized to align with your strategic objectives

In as little as
3 days
with no disruption

Make your servers a powerhouse of reliability

Mitigate risk

Detect and address potential issues before they become critical. Understand your server inventory, health and firmware vulnerabilities to prevent outages, unplanned downtime, or data loss.

Prepare for additions

Whether you're planning to add more RAM, CPU's, disk space, or I/O cards, our Health check will help you evaluate options and provide actionable guidance on the most effective solutions

Simplify management

Get tailored recommendations for updates and lifecycle management and discover solutions to simplify server monitoring and administration.

Unlock insights in just 2 steps

1

Consult | 30 min

Connect with our certified server experts to discuss the scope and goals of the assessment.

2

Access

With secure, temporary remote access, our team will collect health, configuration and inventory on your servers.

Insights

We'll deliver a comprehensive report detailing the health, status, and inventory of your servers, along with proactive recommendations for improvements and ongoing reliability.
